

# MGT551: Building and Leading Security Operations Centers

**GSOM**  
Security Operations  
Manager  
giac.org/gsom

5 Day Program | 30 CPEs | Laptop Required

## You Will Be Able To

- Collect the most important logs and network data
- Build, train, and empower a diverse team
- Create playbooks and manage detection use cases
- Use threat intelligence to focus your budget and detection efforts
- Utilize threat hunting and active defense strategies
- Implement efficient alert triage and investigation workflow
- Implement effective incident response planning and execution
- Choose metrics and a long-term strategy to improve the SOC
- Implement team member training, retention, and prevention of burnout
- Understand SOC assessment through capacity planning, purple team testing, and adversary emulation

**“There are so many [organizations] that seem to be trying to reinvent the wheel. All they need to do is invest in this course for real-world, actionable information that can put them on a solid path toward building, staffing, and leading their own SOC.”**

—Brandi Loveday-Chesley

**“I would recommend this course to anyone running a security operations team. I'd further recommend it to more experienced analysts so they can begin to see the bigger picture.”**

—Robert Wilson, University of South Carolina

Managers must show alignment to the business and demonstrate real value – a challenge when the threats are constantly changing and sometimes unseen. Managing a security operations center (SOC) requires a unique combination of technical knowledge, management skills, and leadership ability. MGT551 bridges gaps by giving students the technical means to build an effective defense and the management tools to build an effective team. Common questions SOC leaders face are:

- How do we know our security teams are aligned to the unique threats facing our organization?
- How do we get consistent results and prove that we can identify and respond to threats in time to minimize business impact?
- How can we build an empowering, learning environment where analysts can be creative and solve problems while focusing on the mission at hand?

Whether you are looking to build a new SOC or take your current team to the next level, MGT551 will super-charge your people, tools, and processes. Each section of MGT551 is packed with hands-on labs and introductions to some of the industry's best free and open source tools, and each day concludes with Cyber42 SOC leadership simulation exercises. Students will learn how to combine SOC staff, processes, and technology in a way that promotes measurable results and covers all manner of infrastructure and business processes. Most importantly, students will learn how to keep the SOC growing, evolving, and improving over time.

## Business Takeaways

- Strategies for aligning cyber defense to organizational goals
- Tools and techniques for validating security tools and processes
- Methodologies for recruiting, hiring, training, and retaining talented defenders and effective management and leadership techniques for technical teams
- Practical approaches to optimizing security operations that can be applied immediately

## Hands-On Training

While this course is focused on management and leadership, it is by no means limited to non-technical processes and theory. The course uses the Cyber42 interactive leadership simulation game to put you in real-world scenarios that spur discussion and critical thinking of situations that you will encounter at work. Throughout the five days of instruction, students will work on fifteen hands-on exercises covering everything from playbook implementation to use case database creation, attack and detection capability prioritization and visualization, and purple team planning, threat hunting, and reporting. Attendees will leave with a framework for understanding where their SOC should be focusing its efforts, how to track and organize defensive capabilities, and how to drive, verify, and communicate SOC improvements.

# Section Descriptions

## SECTION 1: SOC Design and Operational Planning

MGT551 starts with the critical elements necessary to build your Security Operations Center: understanding your enemies, planning your requirements, making a physical space, building your team, and deploying a core toolset. Throughout this course section, students will learn how to build a strong foundation upon which an SOC can operate, focusing first on the most important users and data, and tailoring defense plans to threats most likely to impact your organization. Through workflow optimization, information organization, and data collection, you will learn how to ensure that your security operations will hit the ground running as efficiently as possible while protecting privileged SOC users and data. Exercises show how to implement these concepts through threat group and asset profiling, mapping likely attack paths into your environment, and implementing use cases repeatable playbooks to identify the threats and attack vectors you have identified.

**TOPICS:** Introduction; SOC Functions; SOC Planning; Team Creation, Hiring, and Training; Building the SOC; SOC Tools and Technology; SOC Enclave and Networking

## SECTION 3: Attack Detection, Hunting, and Triage

Section 3 of MGT551 is all about improving detections. We begin with effective triage and analysis and then move to more effective alerting mechanisms, starting with the fundamentals of analytic design. We will discuss detection engineering as a core SOC discipline to be planned, tracked, and measured. You will learn a repeatable, data-driven approach to SOC capacity planning and apply that process in a hands-on exercise using custom tools that you can take back to your own environment. We will also cover the different types of proactive threat hunting, see a structured approach that results in measurable improvements to your detection capability, and apply that approach in a hands-on threat hunting lab. Finally, we will look at active defense concepts and their role in a mature security operations capability. Taking the tools, processes, and concepts from section 3 of MGT551 back to your SOC will ensure that no (virtual) stone in your environment remains unturned.

**TOPICS:** Efficient Alert Triage; Capacity Planning; Detection Engineering; Analytic and Analysis Frameworks and Tools; Threat Hunting; Active Defense

## SECTION 5: Metrics, Automation, and Continuous Improvement

The fifth and final section of MGT551 is all about measuring and improving security operations. We focus on three areas: developing and improving people, measuring SOC performance, and continuous validation through assessment and adversary emulation. We will also cover some of the more challenging elements of managing people in a dynamic and often high-pressure environment: building the right culture, addressing damaging behaviors, and handling common pitfalls of daily operations. By demonstrating value through structured testing and fostering a culture of learning, collaboration, and continuous improvement, we can ensure long term growth and success. In section five, you will receive the tools, techniques, and insights to do just that. Hands-on exercises will include building skills self-assessments and training plans for your analysts, designing SOC metrics, and continuous assessment and validation.

**TOPICS:** Staff Retention and Mitigation of Burnout; Metrics, Goals, and Effective Execution; Measurement and Prioritization Issues; Strategic Planning and Communications; Analytic Testing and Adversary Emulation; Automation and Analyst Engagement

## SECTION 2: SOC Telemetry and Analysis

Section 2 of MGT551 focuses on expanding our understanding of attacker tactics, techniques, and procedures and how we might identify them in our environment. We will discuss defensive theory and mental models that can guide our assessment and planning efforts, data collection and monitoring priorities, and cyber threat intelligence collection. We will also cover more specialized security monitoring use cases like DevOps, supply chain, insider threat, and business e-mail compromise. Exercises include using the MITRE ATT&CK framework to plan security data collection and writing solid threat intelligence requirements for relevant, timely information that answers your most pressing defensive questions.

**TOPICS:** Cyber Defense Theory and Mental Models; Prevention and the Future of Security; SOC Data Collection; Other Monitoring Use Case; Using MITRE ATT&CK to Plan Collection; Cyber Threat Intelligence; Practical Collection Concerns

## SECTION 4: Incident Response

From toolsets to proven frameworks to tips and tricks learned in countless real-world scenarios, section four covers the full response cycle, from preparation to identification to containment, eradication, and recovery, for operations managers. The fourth section of MGT551 begins with the fundamentals of investigation: effective triage, investigative mindset, and tools for avoiding bias. Then the focus turns to preparing your environment to be defended by deploying security controls, identifying high-value assets and users, and designing playbooks to guide your response efforts. Finally, we will review best of breed incident response tools and free frameworks to guide your planning. Lab exercises in section four include incident response playbook design using the free RE&CT framework, investigation review and quality control, and tabletop exercise development.

**TOPICS:** Incident Response (IR) Planning; Preparation; Identification, Containment, and Eradication; Recovery and Post-Incident; Incident Response in the Cloud; Dealing with a Breach; IR Tools; Continuous Improvement

## Who Should Attend

This course is intended for those who are looking to build a Security Operations Center for the first time or improve the one their organization is already running.

Ideal student job roles for this course include:

- Security Operations Center managers or leads
- Security directors
- New Security Operations team members
- Lead/senior SOC analysts
- Technical CISOs and security directors

### NICE Framework Work Roles:

- Information Security Manager: OV-MGT-001
- Cyber Policy and Strategy Planner: OV-SPP-002
- Executive Cyber Leadership: OV-EXL-001
- Program Manager: OV-PMA-001
- Cyber Defense Incident Responder: PR-CIR-001
- OT SOC Operator

**GSOM**

Security Operations Manager  
[giac.org/gsom](http://giac.org/gsom)

## GIAC Security Operations Manager

The GSOM certification validates a professional's ability to run an effective security operations center. GSOM-certified professionals are well-versed in the management skills and process frameworks needed to strategically operate and improve a SOC and its team.

- Designing, planning, and managing an effective SOC program
- Prioritization and collection of logs, development of alert use cases, and response playbook generation
- Selecting metrics, analytics, and long-term strategy to assess and continuously improve SOC operations
