To determine if SANS SEC301: Introduction to Cyber Security is right for you, ask yourself five simple questions:

- Do you have basic computer knowledge, but are new to cybersecurity and in need of an introduction to the fundamentals?
- Are you bombarded with complex technical security terms that you don't understand?
- Are you a non-IT security manager who lays awake at night worrying that your company will be the next mega-breach headline story on the 6 o'clock news?
- Do you need to be conversant in basic security concepts, principles, and terms, even if you don't need “deep in the weeds” detail?
- Have you decided to make a career change to take advantage of the job opportunities in cybersecurity and need formal training and certification?

If you answer yes to any of these questions, then the SEC301: Introduction to Cyber Security training course is for you. Students with a basic knowledge of computers and technology but no prior cybersecurity experience can jump-start their security education with insight and instruction from real-world security experts in SEC301.

This completely revised and comprehensive five-day course covers a wide range of baseline topics, including terminology, the basics of computer networks, security policies, incident response, passwords, and even an introduction to cryptographic principles. The hands-on, step-by-step learning format will enable you to grasp all the information presented even if some of the topics are new to you. You'll learn fundamentals of cybersecurity that will serve as the foundation of your security skills and knowledge for years to come.

Written by a security professional with over 30 years of experience in both the public and private sectors, SEC301 provides uncompromising real-world insight from start to finish. The course prepares you for the Global Information Security Fundamentals (GISF) certification test, as well as for the next SANS course in this progression, SEC401: Security Essentials Bootcamp Style. It also delivers on the SANS promise: You will be able to use the knowledge and skills you learn in SEC301 as soon as you return to work.

“SEC301 is an extremely valuable course, even for someone with 12 years of IT experience!”
— Brian Pfau, Banfield Pet Hospital
### SECTION 1: Security's Foundation
Every good security practitioner and every good security program begins with the same mantra: learn the fundamentals. SEC301 starts by instilling familiarity with core security terms and principles. By the time you leave the classroom after the first section, you will fully understand the Principle of Least Privilege and Confidentiality, Integrity, Availability (CIA), and you’ll see why those principles drive all security discussions. You will be conversant in the fundamentals of risk management, security policy, and authentication/authorization/accountability.

### SECTION 3: An Introduction to Cryptography
Cryptography is one of the most complex issues faced by security practitioners. It is not a topic you can explain in passing, so we will spend some time on it. Not to worry, we won’t take you through the math behind cryptography. Instead, we learn basic crypto terminology and processes. What is steganography? What is substitution and transposition? What is a “work factor” in cryptography and why does it matter? What do we mean by symmetric and asymmetric key cryptography and “cryptographic hash,” and why do you need to know? How are those concepts used together in the real world to create cryptographic systems?

### SECTION 4: Cybersecurity Technologies – Part 1
Our fourth section in the classroom begins our exploration of cybersecurity technologies. We begin with wireless network security (WiFi and Bluetooth), and mobile device security (i.e., cell phones). We follow that with a brief look at some common attacks. We then move into a discussion of malware and anti-malware technologies. We end the section with an examination of several data protection protocols used for email encryption, secure remote access, secure web access, secure file transfer, and Virtual Private Network (VPN) technologies.

### SECTION 5: Cybersecurity Technologies – Part 2
The final section of our SEC301 journey continues the discussion of cybersecurity technologies. The section begins by looking at several security technologies, including compartmentalization, firewalls, Intrusion Detection Systems and Intrusion Prevention Systems (IDS/IPS), sniffers, content filters, etc. We then take a good look at browser and web security, and the difficulties of securing the web environment. For example, students will understand why and how their browser connects to anywhere from 5 to 100 different Internet locations each time they load a single web page. We end the section with a look at system security to include hardening operating systems, patching, virtual machines, cloud computing, and backup.

### Who Should Attend
- Anyone new to cybersecurity and in need of an introduction to the fundamentals of security
- Those who feel bombarded with complex technical security terms they don’t understand, but want to understand
- Non-IT security managers who deal with technical issues and understand them and who worry their company will be the next mega-breach headline story on the 6 o’clock news
- Professionals with basic computer and technical knowledge in all disciplines who need to be conversant in basic security concepts, principles, and terms, but who don’t need “deep in the weeds” detail
- Those who have decided to make a career change to take advantage of the job opportunities in cybersecurity and need formal training and certification

---

"SEC301 is a great class for the individual who wants to learn an extensive amount of material in one week."
— Steven Chovanec, Discover Financial Services
