

Will The Real Next Generation Security Please Stand Up?

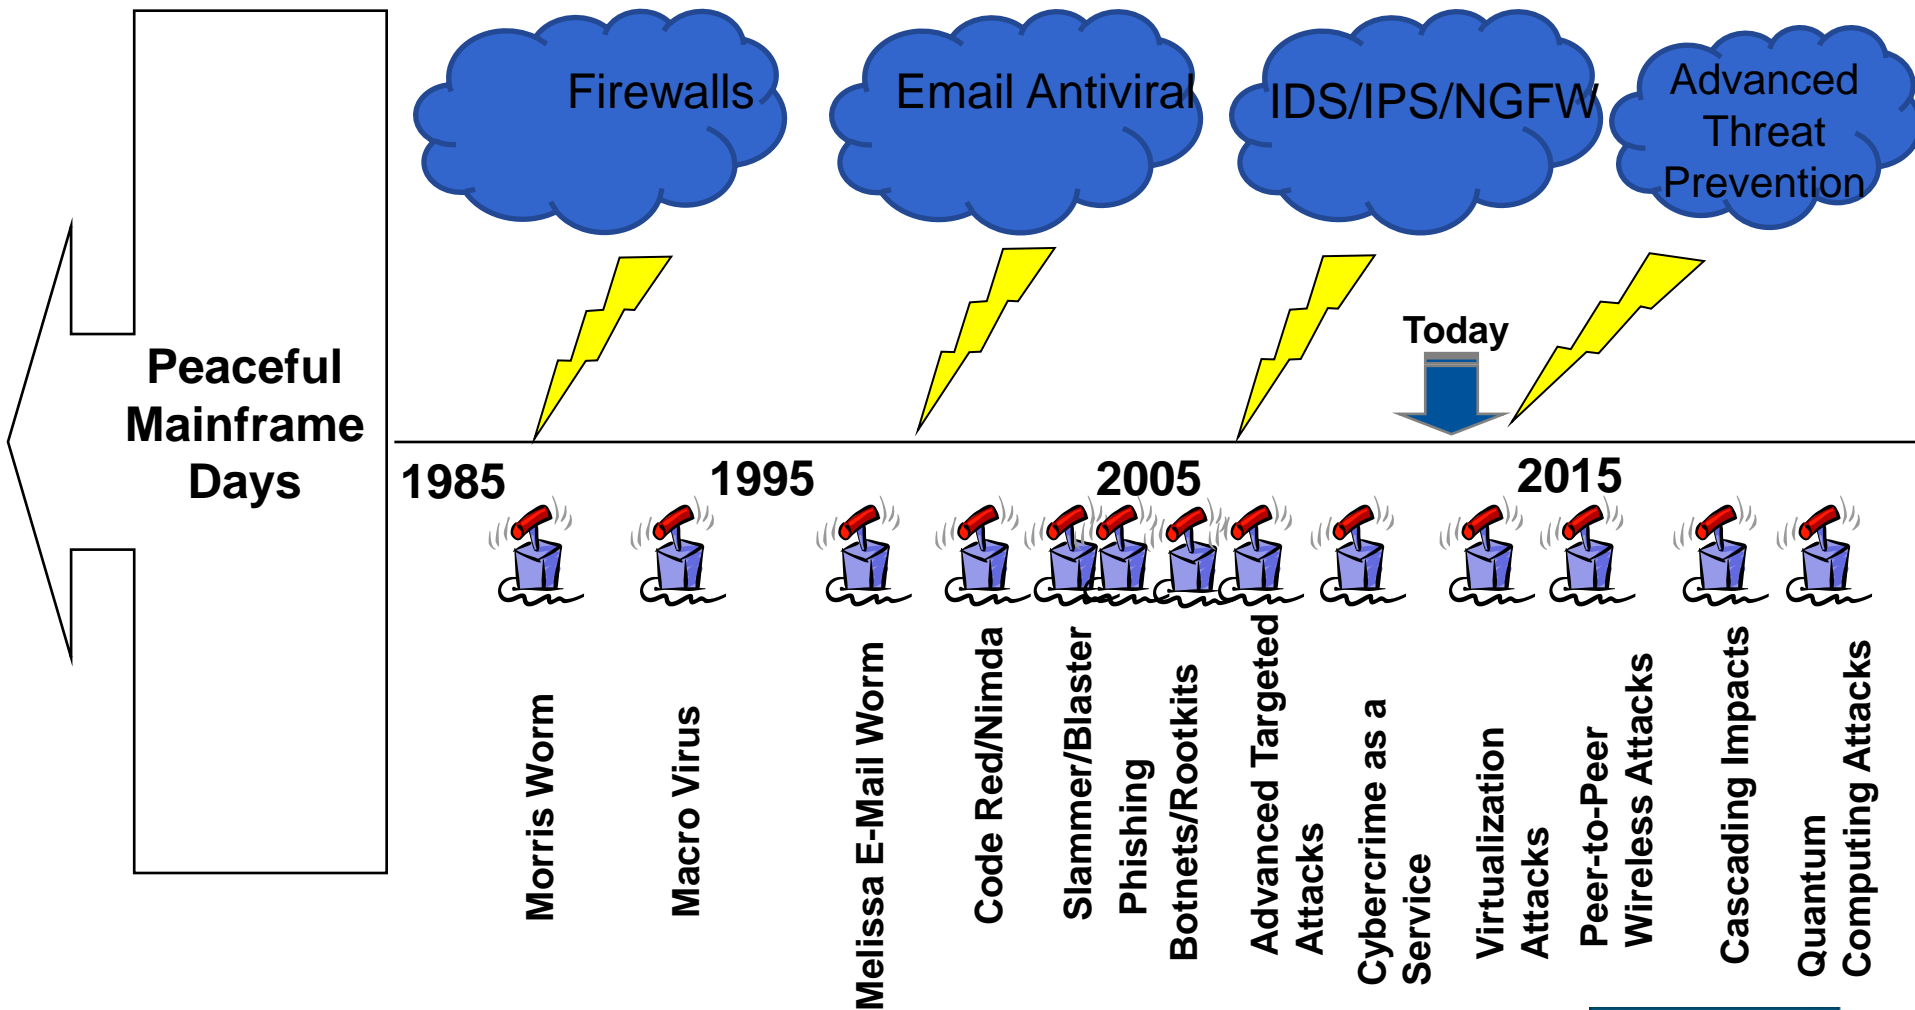

John Pescatore
Director, SANS Emerging
Security Trends

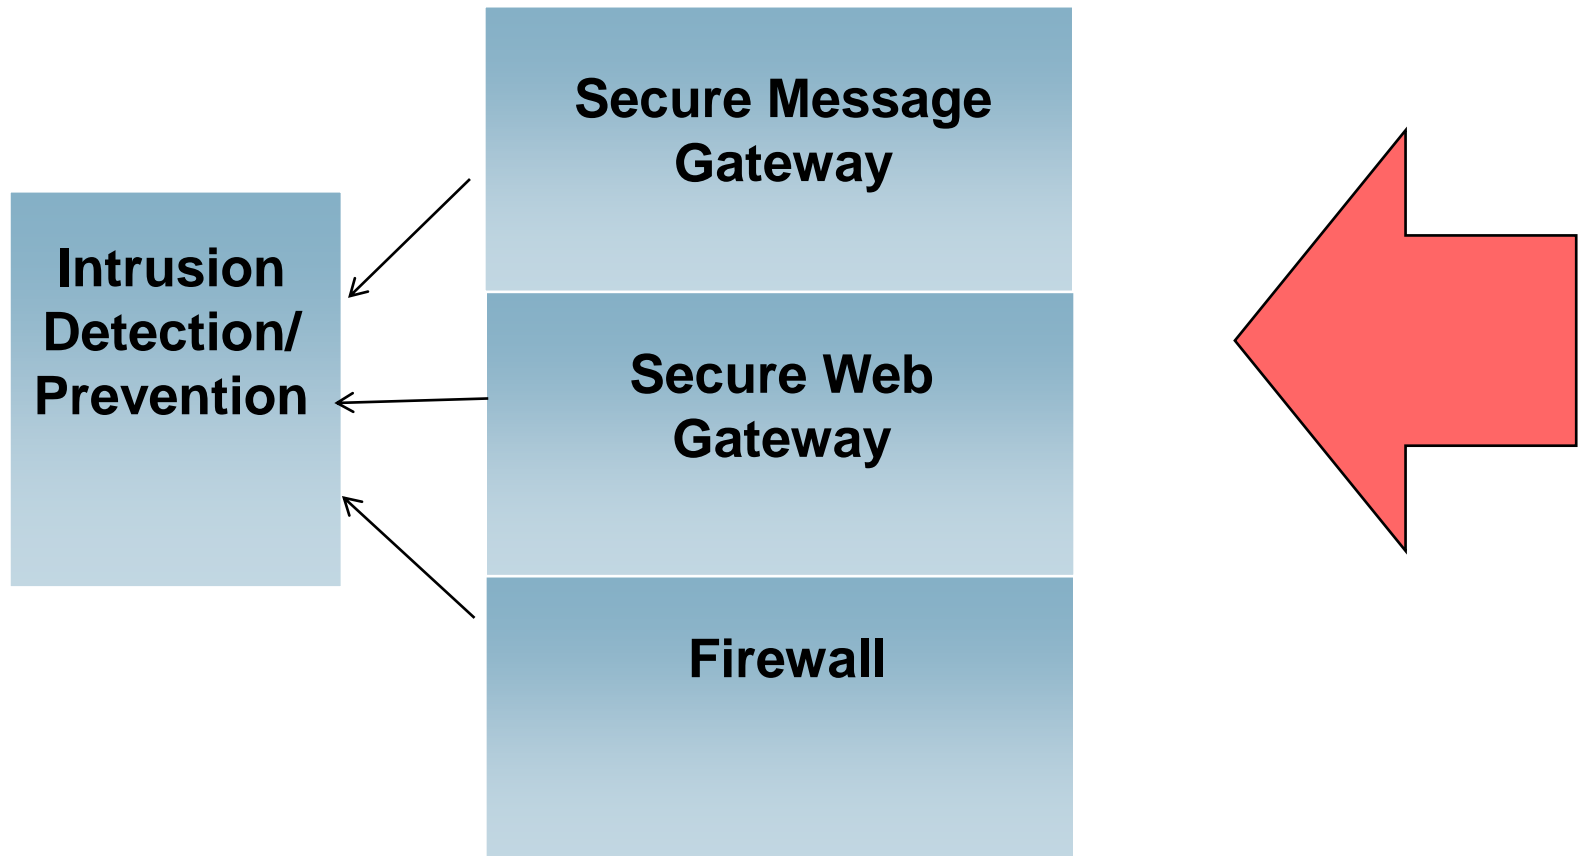

Moore's Law and Next Generation Security

- Security products have to obey Moore's Law:
 - If a product doesn't address new threats, the price should drop dramatically.
 - To maintain pricing, security products need to do more with each new generation.
- Get more efficient at dealing with old threats, more effective at dealing with new threats.
- There really is no need for a new name for every new device that deals with threats.
