

QRadar Community Edition... free

SANS SIEM & Tactical analytics Summit 2017

- Pop it onto your laptop. Will run at home in a VM!
- It is mighty, yet small. Only requires 2 cores and only 4GB of RAM.
- Fully functional tactical SIEM use cases.
- It is a true software installation that simply runs on top of CentOS.
- Run and build App, like Security App Exchange.
- It is unwarranted. What does that mean? No 1-800-IBMHELPM... But we have you covered with our QRadar users forums.
- Data rate Restricted to 50EPS and 5KFPM.
