Cypher Wheel Assembly Instructions

1. Cut out both wheels. Make sure you don't cut off the black pointer (triangle) on the smaller one!
2. Make a small hole in the middle of both wheels.
3. Join the two wheels together (small one on top of the big one) with a brass split pin or cotter pin.
4. Time to create your own secret codes...write a message you wish to encode.
5. Align the pointer on the blue wheel with a letter on the yellow wheel. (Keep it aligned the same way while encoding.)
6. For each letter of your message, find that character on the yellow wheel, and write down the letter that is just below it on the blue wheel. When finished, you'll have your encoded/encrypted message!
