SANS Mobile Device Security Summit 2013
January 7-8 * Post-Summit Classes January 9-14

The evolution of mobile devices shows no signs of slowing, and with each new generation, the devices become more efficient tools that employees increasingly rely on to conduct both their corporate and personal business. Apps that allow the user to access sensitive corporate data are prime targets for hackers and provide a wide range of access ports to data. Controlling security breaches of mobile devices is complex due to the varying software and device types. Additionally, many organizations have no restrictions on use of personal devices.

The 2nd Annual Mobile Device Security Summit brings attendees eager to hear mobile device security experts and practitioners discussing the best approaches to this new and evolving challenge. Tools addressing this evolving need are a critical part of the security solution.

If your company provides mobile device security solutions and you want to reach those looking to address these critical cyber security issues, this summit is for you!

Disneyland Hotel
1150 Magic Way
Anaheim, CA 92802
Phone: 714-956-6425
