4 ICS Security training courses | 2-day Summit  
Debut of SANS ICS515 Active Defence & Incident Response  
**SANS dedicated European event for ICS/SCADA security experts**

# SANS ICS SECURITY TRAINING

**SANS ICS Amsterdam 2015 hosts four dedicated training courses for those tasked with securing Industrial Control Systems as well as a two day ICS Security Summit. This specialist training event takes place at the Radisson Blu Hotel, Amsterdam, from September 22nd - 28th.**

As well as the intensive foundational course, ICS410: ICS/SCADA Security Essentials led by Justin Searle, SANS' new course ICS515: ICS Active Defence and Incident Response runs for the first time in Europe - led by SANS Instructor Robert M. Lee.

The two day ICS Summit brings together program managers, control systems engineers, IT security professionals and critical infrastructure protection specialists from asset owners and operators along with government and research leaders. SANS European ICS Security Summit provides the opportunity to learn and discuss the newest and most challenging cyber security risks to control systems and the most effective defences. The Security Summit is an action conference designed so that every attendee leaves with new tools and techniques they can put to work immediately when they return to their office.

Attendees also benefit from bonus evening talks and networking opportunities with like-minded ICS security professionals.

# ICS410 ICS/SCADA SECURITY ESSENTIALS

**Instructor: Justin Searle**

Certification: GICSP

SANS has joined forces with industry leaders to equip security professionals and control system engineers with the cybersecurity skills they need to defend national critical infrastructure. ICS410: ICS/SCADA Security Essentials provides a foundational set of standardized skills and knowledge for industrial cybersecurity professionals. The course is designed to ensure that the workforce involved in supporting and defending industrial control systems is trained to keep the operational environment safe, secure, and resilient against current and emerging cyber threats.

For a full course description and to register online see [www.sans.org/u/4Aw](http://www.sans.org/u/4Aw)

# ICS515 ACTIVE DEFENCE AND INCIDENT RESPONSE

**Instructor: Robert M Lee**

This new SANS course debuts in Amsterdam and teaches the actual hands-on skills needed to protect industrial control system networks against cyber threats. Students learn how to respond to and deny those threats by utilising active defence mechanisms in concert with incident response. A fully hands-on approach to teaching ensures students develop a deep, technical understanding of key processes.
