About the SANS/CIS Partnership

Partnership Objectives

The Center for Internet Security and SANS Institute Partnership Program draws on the shared mission to ensure that information security practitioners in critical organizations have the skills needed to protect national security and enhance cybersecurity readiness and response of State, Provincial, Local, Tribal and Territorial government entities. This program offers both security awareness and online technical training courses to qualifying organizations at a substantial cost savings.

SANS Online Technical Training offers the same content, instructors, and results as our live courses with the flexibility to learn in an online environment, allowing information security professionals to train whenever and wherever it's most convenient. Online courses feature hands-on labs and access to subject-matter experts to guide students through challenging concepts or questions. Save more than 50% when you purchase training credits during one of our partnership purchase windows. Online training credits may be redeemed for any course offered in our two most popular training formats: self-paced e-learning via OnDemand and livestream, interactive scheduled sessions via Live Online. Security professionals have their choice from more than 45 courses and certifications in disciplines that include:

- **Cyber Defense**
- **Penetration Testing**
- **Incident Response & Threat Hunting**
- **Management**
- **Industrial Control Systems**
- **Application Security**

Technical training is a critical component for adoption of core security awareness concepts. Compliance and behavior change becomes difficult for non-technical individuals without the proper content. SANS Security Awareness offers a comprehensive solution for end users and individuals of all levels with expert-authored content. Created by a trusted global network of cybersecurity professionals, this Partnership Program includes several key Security Awareness products:

- **End User** – Comprehensive security awareness training for all computer users based on the Critical Security Controls
- **Healthcare** – Computer-based security awareness training tailored to healthcare organizations
- **Developer** – Train your developers in secure coding techniques and how to recognize current threat vectors in web applications
- **Engineer** – Rigorous computer-based training for those interacting or operating with Industrial Control Systems
- **Phishing** – Test your employees through phishing simulations consistent with real-world attacks
- **CIP** – Relevant training addresses NERC CIP reliability standards for the utility industry
