SCORE Security Checklist

NISPOM Chapter 8 - Check List

			Based on NISPOM Chapter 8 Requiremen		
Assessor		Compiled By: Da	arren Bennett (dbennett@cyberintel.com) and Joe K Assessment Date:		otmail.com)
Reference		Objective and	Security Test	Results	
Checklist	Standard	Sub-Section	Confirmation Question	Findings	Compliance Y/N
Section 1.	Responsibil	lities and Dutie	es		
1.100.	8.100.	General			
1.100. 1.101a	8.101a	Responsibilities For CSA	Establishment of a line of authority for training, oversight, program review, certification, and accreditation of IS used by contractors for the processing of classified information		
1.101a2	8.101a-2	Responsibilities For CSA	The CSA conducted a risk management evaluation based on the contractors facility, the classification, and sensitivity of the information processed		
1.101b	8.101b	Responsibilities For CSA	An IS Security Policy addressing the classified processing environment has been published and promulgated		
1.101b2	8.101b2	Responsibilities For CSA	An IS Security Manager (ISSM) has been appointed with oversight responsibility for the development, implementation, and evaluation of the facility's IS security program		
1.101b3	8.101b3		Contractor management is certain that the ISSM is trained to a level commensurate with the complexity of the facility's IS		
1.102.	8.102.	Designated Accrediting/ Approval Authority	The CSA has been Designated Accrediting/Approving authority (DAA)		
1.103.	8.103.	IS Security Manager (ISSM) Responsibilities	The ISSM has read and understands the responsibilities as per Section 8.103 of the NISPOM chapter 8		
1.104.	8.104.	Information System Security Officer(s) (ISSO)	The ISSO(s) has/have read and understand the responsibilities as per Section 8.104 of the NISPOM chapter 8		
1.105.	8.105.	Users of IS	Privileged and general users of the IS have read and understand the responsibilities as per Section 8.105 of		
Section 2.	Certificatio	n and Accredi	the NISPOM chapter 8 tation		
2.100.	8.200.	Overview			
2.101.	8.201.	Certification			
2.102.	8.202.	Process Accreditation			
Section 3.	Common R	equirements			
3.100.	8.300.	Introduction			
3.101.	8.301.	Clearing			
3.101a.	8.301a.	and Sanitization Clearing	Prior to re-use of media in an area that has an acceptable level of protection for the data, has all data on the media been eradicated? Including Memory, Buffers and reusable memory To prevent access to previously stored information.		
3.101b.	8.301b.	Sanitization	Prior to release of media to an area that does not have an acceptable level of protection for the data, has all data on the media been removed? (i.e. Release from classified information controls or release to a lower classification level)		
3.102.	8.302.	Examination of Hardware and Software			
3.102a.	8.302a.	IS Software	Has all commercially procured software been tested to ensure the software contains no obvious features that might be detrimental to the security of the IS? Has Security-related software been tested to verify that the security features function as specified?		
3.102b.	8.302b.	IS Hardware	Has the hardware been examined to determine that it is in good working order and has no elements that might be detrimental to the secure operation of the IS when under facility control and cognizance? (Changes and developments that affect security may require re-examination)		

			Sneet1	
2 1025	9 202 2	Management	le each user uniquely identified and is that identity	
3.103a.	8.303a.	Unique Identification	Is each user uniquely identified and is that identity associated with all auditable actions taken by that individual?	
3.103b.	8.303b.	Authentication at Login	Its each user required to authenticate their identity at login by using an authenticator (i.e. password) as well as their user id before executing any application or utility on the system?	
3.103c.	8.303c.	Applicability of Logon Authentication	Is it possible to waive the requirement for Logon Authentication (are all of the following statements true?)	
			*The workstation does not have a permanent internal hard drive, and the removable hard drive and other associated storage media are stored in an approved security container when not in use	
			*All of the users with access to the workstation and the security container/ removable media have the required clearance level and need-to-know for all of the data processed on the workstation	
			*The workstation is located within an approved security area, and all uncleared/lower-cleared personnel are escorted within the area.	
3.103d.	8.303d.	Access to Authentication Data	Has access to authentication data been restricted to authorized personnel through the use of encryption or file access controls, or both?	
3.103e.	8.303e.	User ID Reuse	Have all previous access authorizations (including file accesses for that user ID) been removed prior to reuse of any user ID's? (If applicable)	
3.103f.	8.303f.	User ID Removal	Have users that have terminated employment, lost access to the system for cause, or no longer have reason to access the IS had their user ID and its authentication disabled or removed from the system?	
3.103g.	8.303g.	User ID Revalidation	User IDs are revalidated annually (or more frequently)	
3.103h.	8.303h.	Protection of Individual Authenticator	Authenticators in the form of knowledge (password) or possession (smart card, keys) are not shared with anyone.	
3.103i.	8.303i.	Protection of Individual Passwords	Are all of the following requirements met when using passwords as authenticators?	
		. 435.10.43	(1) Passwords shall be protected at a level commensurate with the sensitivity level or classification level and classification category of the information to which they allow access. (2) Passwords shall contain a minimum of eight non-blank characters, shall be valid for no longer than	
			12 months and changed when compromised. (3) Passwords shall be generated by a method approved by the CSA. Password acceptability shall be based on the method of generation, the length of the password, password structure, and the size of the password space. The password generation method, the length of the password, and the size of the password	
			length of the password, and the Size of the password space shall be described in an attachment to the SSP. (4) When an IS cannot prevent a password from being echoed (e.g., in a half-duplex connection), an overprint mask shall be printed before the password is entered to conceal the typed password. (5) User software, including operating system and other	
			security-relevant software, comes with a few standard authenticators (e.g., SYSTEM, TEST, and MASTER) and passwords already enrolled in the system. The ISSO shall ensure that the passwords for all standard authenticators are changed before allowing the general	
			user population access to the IS. The ISSO shall also ensure that these passwords are changed after a new system version is installed or after other action is taken that might result in the restoration of these standard passwords.	
3.104.	8.304.	Maintenance	Have all maintenance nowanal beautiful and the	
3.104a.	8.304a.	Cleared Maintenance Personnel	Have all maintenance personal been cleared to the highest classification level on the system and been indoctrinated for all information processed on the system? When possible, will an appropriately cleared and technically knowledgeable, facility employee be present within the area where the maintenance is being	
3.104b.	8.304b.	Uncleared (or Lower-Cleared)	performed to ensure that security procedures are being followed? Are the following procedures followed when allowing access to the system by uncleared or lower-cleared	
		Maintenance Personnel	maintenance personnel? (1) an appropriately cleared and technically qualified escort monitors and records the maintenance person's activities in a maintenance log. Uncleared maintenance personnel must be U.S. citizens. (2) System initiation and termination shall be performed	

			Sheet1	
2.105	0.305		by the escort. In addition, keystroke monitoring shall be performed during access to the system (3) Prior to maintenance, the IS shall be completely cleared and all non-volatile data storage media shall be removed or physically disconnected and secured. When a system cannot be cleared procedures, which are identified in the SSP, shall be enforced to deny the maintenance personnel visual and electronic access to any classified data contained on the system.	
3.105.	8.305.		Have policies and procedures to detect and deter incidents caused by malicious code, such as viruses or unauthorized modification to software, been implemented? Are all files checked for viruses before being introduced on the IS and checked for other malicious code as feasible?	
			Is the use of personal or public domain software strongly discouraged? Each installation of such software must be approved by the ISSM.	
3.106.	8.306.	Marking Hardware , Output, and Media		
3.106a.	8.306a.	Hardware Components	Do all components of the IS, including input/output devices that have the potential for retaining information, terminals, stand-alone microprocessors, or word processors used as terminals, bear a conspicuous, external label that states the highest classification level and most restrictive classification category of the information accessible to the component in the IS? (If the CSA requires that labels be color coded to indicate classification level they shall be orange for Top Secret, red for Secret, blue for Confidential, and green for unclassified.)	
3.106b.	8.306b.	and Removable Media	Have methods been established for hard copy output (paper, fiche, film, and other printed media) and removable media to be marked with visible, human-readable, external markings to the accreditation level of the IS unless an appropriate classification review has been conducted or in the case of media, the information has been generated by a tested program verified to produce consistent results and approved by the CSA. Such programs will be tested on a statistical basis to ensure continuing performance.	
3.106c.	8.306c.	Unclassified Media	Is all unclassified media in the CSA-approved areas marked as unclassified?	
3.107.	8.307.	Personnel Security		
			For all personnel with system access, are system security policies; and maintaining and monitoring the confidentiality, integrity, and availability attributes that are inherent within their IS. Duties, responsibilities, privileges, and specific limitations of IS users, both general and privileged, been specified in writing? Are security duties distributed to preclude any one individual from adversely affecting operations or the integrity of the system?	
3.108.	8.308.	Physical Security		
3.108a.	8.308a.	Safeguards	Have safeguards been established that prevent or detect unauthorized access to the IS and unauthorized modification of the IS hardware and software? Hardware integrity of the IS, including remote equipment, shall be maintained at all times, even when all classified information has been removed from the IS.	
3.108b.	8.308b.	Classified Processing	All classified processing takes place in a CSA-Approved area.	
3.108c.	8.308c.	Visual Access	Are all devices that display or output information in human-readable form positioned to prevent unauthorized individuals from reading the information?	
3.108d.	8.308d.	Unescorted Access	Do all personnel granted unescorted access to the area containing the IS have an appropriate security clearance?	
3.109.	8.309.	Protection of Media		
		Neula	Has/Will media be protected to the level of accreditation until an appropriate classification review has been conducted.	
3.110.	8.310.	Review of Output and Media		
3.110a.	8.310a.	Human readable output review	An appropriate sensitivity and classification review shall be performed on human-readable output before the output is released outside the security boundary to determine whether it is accurately marked with the appropriate classification and applicable associated security markings.	
3.110b.	8.310b.	Media Review	Electronic output, such as files, to be released outside	

			Sheet1	
			the security boundary shall be verified by a comprehensive review (in human-readable form) of all data on the media including embedded text (e.g., headers and footer) before being released. Information on media that is not in human-readable form (e.g., embedded graphs, sound, video, etc.) will be examined for content using the appropriate software application. CSA-approved random or representative sampling techniques may be used to verify the proper marking of large volumes of output.	
3.111.	8.311.	Configuration	ange volumes of output	
3.111a.	8.311a.	Management Configuration Documentation	Have processes been implemented to identify and document the type, model and brand of system or network component (e.g., workstation, personal computer, or router), security-relevant software product names and version or release numbers, and physical location?	
3.111b.	8.311b.	System Connectivity	Have procedures been implemented to identify and document system connectivity, including any software used for wireless communication, and any communications media?	
3.111c.	8.311c.	Connection Sensitivity	Is the sensitivity level of each connection or port controlled by the Security Support Structure (SSS) documented?	
3.111d.	8.311d.	CM Plan	Has the facility CM program been documented in a CM plan that includes the following? (1) Formal change control procedures to ensure the review and approval of security-relevant hardware and software. (2) Procedures for management of all documentation, such as the SSP and security test plans, used to ensure system security. (3) Workable processes to implement, periodically test, and verify the CM plan. (4) A verification process to provide additional assurance that the CM process is working effectively and that changes outside the CM process are technically or procedurally not permitted.	
Section 4.	. Protection	Measures		
4.100.	8.400.	Protection Profiles (intro)		
4.101.	8.401.	Level of Concern		
4.101a.	8.401a.	Information Sensitivity Matrices	Have the information sensitivity matrices (tables 1, 2, and 3 in Section 4 of the NISPOM Chapter 8) been used to establish the appropriate protection levels for confidentiality, and the level of concern for integrity, and availability? (If contractually mandated) (1) Has a determination of high, medium, or basic	
			been made for each of the three attributes: confidentiality, integrity, and availability? It is not necessary for the level of concern to be the same for all attributes of the system. (2) Has the highest level of concern for each category been used when multiple applications on a system result in different levels of concern for the categories of confidentiality, integrity, and availability?	
4.101b.	8.401b.	Confidentiality Level of Concern	What is the established <u>Confidentiality</u> Level of Concern?	
		LEVEL OI COILEM	In considering confidentiality, the principal question is the necessity for supporting the classification levels and the categories of information (e.g., Secret National Security Information) on the system in question. The Protection Level Table for Confidentiality (Table 4) combines the processing environment with the level of concern for confidentiality to provide a Protection Level. The Protection Level is then applied to Table 5 to provide a set of graded requirements to protect the confidentiality of the information on the system.	
4.101c.	8.401c.	Integrity Level of Concern	What is the established <u>Integrity</u> Level of Concern?	
		Level of Concern	In considering integrity, the principal question is the necessity for maintaining the integrity of the information on the system in question.	
4.101d.	8.401d.	Availability Level of Concern	What is the established <u>Availability</u> Level of Concern?	
			In considering availability, the principal consideration is the need for the information on the system in question to be available in a fixed time frame to accomplish a mission.	

			Sneet1	
4.102.	8.402.	Protection Level		
			(Determined by the relationship between two parameters: first, the clearance levels, formal access approvals, and need-to-know of users; and second, the level of concern based on the classification of the data on a particular system.)	
4.102a.	8.402a.	Protection Level 1	Do all users have all required approvals for access to all information on the system? (all users must have all required clearances, formal access approvals, and the need-to-know for all information on the IS, i.e. dedicated mode.)	
4.102b.	8.402b.	Protection Level 2	Do all users have all required clearances, and all required formal access approvals, but at least one user lacks the need-to-know for some of the information on the system? (i.e. a system high mode.)	
4.102c.	8.402c.	Protection Level 3	Do all users have all required clearances, but at least one user lacks formal access approval for some of the information on the system?(i.e. compartmented mode.)	
4.102.	8.402.	Appropriate Protection Level	What is the established Protection Level for the system? (based on the criteria above)	
4.103.	8.403.	Protection		
		Profiles	The tables listed in section 8-403 of the NISPOM chapter 8 represent Protection Profiles. Use these tables to assist in determining the Level of Concern and Protection Level of each system.	
Section 5	. Special Ca	ategories		
5.100. 5.101.	8.500.	Overview Single-User,		
5.101.	8.501.	Stand-alone		
			Is the system a single-user, stand-alone system? Has the CSA approved administrative and environmental protection measures for the system in lieu of technical ones?	
			What are the specific administrative/environmental measures that have been specified? (or where are they defined)	
			(Systems that have one user at a time, are sanitized between users and periods of different classification/sensitivity, are periods processing systems as covered below)	
5.102.	8.502.	Periods Processing	Systems as covered belony	
5.102a.	8.502a.	Periods Processing	Will the system be used for Periods Processing? (Periods processing provides the capability to either have more than one user or group of users (sequentially) on a single-user IS who do not have the same need-to-know or who are authorized to access different levels of information; or use an IS at more than one protection level (sequentially).)	
5.102b.	8.502b.	Sanitization	What specific sanitization procedures will be employed	
5.102c.	8.502c.	after use. Sanitization Between Periods	by each user before and after each use of the system? What procedures for sanitization of all information before transitioning from one period to the next (e.g., whenever there will be a new user(s) who does not have an access authorization or need-to-know for data processed during the previous period, changing from one protection level to another) have been established?	
5.102d	8.502d.	Media For Each Period	Is there separate media for each period of processing? Including copies of operating systems, utilities, and applications software?	
5.102e.	8.502e.	Audit	applications soliwate? If there are multiple users of the system and the system is not capable of automated logging, has the CSA required manual logging? (Audit trails are not required for single-user stand-alone systems)	
5.103.	8.503.	Pure Servers		
5.103a.	8.503a.	Specialized Systems	Specialized systems acting as pure servers in a network that do not fit the protection level criteria may need fewer technical security countermeasures. Are the following statements true of the system? (ALL must be true) (1) No user code is present on the system.	
			(2) Only system administrators and maintainers can access the system. (3) The system provides non-interactive services to clients (e.g., packet routing or messaging services). (4) The hardware and/or application providing network	

i	i	1	Landana aliana akan marakan marakan arawa ana ana ana ana arawa arawa arawa arawa arawa arawa arawa arawa araw	1
			services otherwise meet the security requirements of the network.	
			(5) The risk of attack against the Security Support	
			Structure (SSS) using network communication paths is	
			sufficiently low. (6) The risk of attack against the SSS using physical	
			access to the system itself is sufficiently low.	
5.103b.	8.503b.	The	Does the system meet PL-3 security	
		Platform	requirements? (minimum)	
			Are all users who use the guard/server application limited to specific capabilities?	
			Does the guard application/server provide more	
			stringent technical protections appropriate for the	
			systems protection level and operational environment? Are assurances appropriate to the level of concern	
			for the system implemented?	
5.103c.	8.503c.	Understanding	Is it understood that a system with general users or	
		what is NOT a "Pure Server"	that executes general user code are NOT "pure servers"? (and must therefore meet all security	
		a Tule Server	requirements specified for their protection level	
			and operational environment)	
5.103d.	8.503d.	The Term "Pure	Is it understood that a system may be considered a "pure server" even though it may not resemble	
		Server"	what has been traditionally refered to as a server?	
			(i.e. a messaging system on a general purpose	
			computer platform could be accredited under this section if it meets the requirements in 8.503b (above))	
5.103e.	8.503e.	Understanding	Is it understood that the above mentioned technical	
		that these	security requirements that have been eased do not	
		exceptions do not imply	imply any relaxation in other security requirements? (i.e. physical and communications requirements)	
		relaxation of	Is it also understood that this easing of technical	
		other security	requirements is predicated upon adequate application	
		requirements	of physical security and other appropriate security disciplines?	
5.104.	8.504.	Tactical,	Has the CSA determined that this system is sufficiently	
		Embedded,	incapable of alteration, and that the application(s)	
		Data-Acquisition, and Special-	running on the system provide an adequate level of security? (If so, the system does not have to meet	
		Purpose	additional security requirements specified for	
		Systems	more-general-purpose systems in this section)	
5.105.	8.505.	Systems with Group	Provided that the systems includes an acceptable level of individual accountability, shall group authenticators	
		Authenticators	be used for broader access after the use of a unique	
			authenticator for initial authentication and will this be	
			documented in the SSP? (Group authenticators may not be shared with anyone outside the group)	
Section 6.	Protection	Requirements	plot be shared with anyone outside the group)	
		_		
6.100.	8.600.	Introduction		
		Introduction Alternate Power	Have the power requirements for each of the systems been

6.108.	8.608.	Resource Control (ResrcCtrl)	Have the ResrcCtrl requirements for each system been determined? (None or ResrcCtrl 1) Has a process been developed and tested to ensure the	
6.108.	8.608.	ResrcCtrl 1	system contains no residual data before being assigned, allocated, or reallocated.	
			Have the SessCtrl requirements for each system been	
6.109.	8.609.	(SessCtrl) SessCtrl 1	determined? (SessCtrl 1 or SessCtrl 2)	
6.109a.	8.609a.	Requirements	Are all users notified prior to gaining access to a system that	
6.109a1.	8.609a1.	User Notification	system usage is monitored, recorded, and subject to audit, and that by using the system, he/she has granted consent to such monitoring and recording, and that unauthorized use is prohibited and subject to criminal and civil penalties? Does each initial screen (displayed before the user log on) contain a warning text, provided and approved by the CSA, to the user and that requires positive action by the user to remove the notice from the screen. If it is not possible to provide an "initial screen" warning notice, is an other method of notification developed and approved by the CSA used?	
6 100-2	8 600-2	Successive	Are successive logon attempts controlled as specified in	
6.109a2.	8.609a2.	Logon Attempts	section 8.609a2 ? Does the system grant entry only in accordance with the	
6.109a3.	8.609a3.	System Entry	conditions associated with the authenticated user's profile? If no explicit entry conditions are defined, is the default to prohibit all remote activities, such as remote logons and anonymous file access?	
6.109b.	8.609b.	SessCtrl 2 Requirements	Is the system compliant with the SessCtrl 1 requirements?	
6.109b1.	8.609b1.	Multiple Login Control	If the IS supports multiple logon sessions for each user ID or account, does the IS provide a protected capability to control the number of logon sessions for each user ID, account, or specific port of entry?	
6.109b2.	8.609b2.	User Inactivity	Does the IS default to a single logon session? Does the IS detect an interval of user inactivity, such as no keyboard entries, and disable any future user activity until the user re-establishes the correct identity with a valid authenticator? Is the inactivity time period and restart requirements documented in the SSP?	
6.109b3.	8.609b3.	Logon Notification	In the user notified upon successful logon of: the date and time of the user's last logon; the location of the user at last logon; and the number of unsuccessful logon attempts using this user ID since the last successful logon? Does this notice require positive action by the user to remove it from the screen?	
		Security	nom the sereem.	
6.110.	8.610.	Documentation (Doc)		
6.110a.	8.610a.	Doc 1 Requirements		
6.110a1.	8.610a1.	SSP	Does the SSP contain the name, location, and phone number of the responsible system owner, CSA, ISSM, and ISSO? Does the SSP contain a brief narrative description of the system or network mission or purpose and architecture, including subnetworks, communications devices, and protocols?	
			Does the SSP contain the sensitivity or classification levels, and categories of all information on the system and clearance, formal access approval and need-to-know of IS users? Does the SSP contain The confidentiality level of concern and	
			protection level, the integrity level of concern, and the availability level of concern? Does the SSP Identify protection measures and how they are	
			being met?	
			Does the SSP contain a description of any approved variances from protection measures? Is a copy of the approval documentation shall be attached to the SSP?	
			Does the SSP contain a description of the risk assessment of any threats or vulnerabilities unique to the system. If there are no threats or vulnerabilities unique to the facility or system, Is there a statement to that effect included in the SSP? If any vulnerabilities are identified by the assessment of unique threats, are the countermeasures implemented to mitigate the	
			vulnerabilities described? Does the SSP contain a brief description of the system architecture, including a block diagram of the components that show the interconnections between the components and any connections to other systems, and an information flow diagram.	

i	i	ì	The same estimates at the state of the state	
			It connections to other systems exist, a memorandum of understanding is necessary if the systems are approved by a	
İ			person other than the CSA responsible for this system. Does	
			the SSP contain a copy of any memorandum of understanding	
			with other agencies?	
			Does the SSP contain a brief description of the security support structure including all controlled interfaces, their	
			interconnection criteria, and security requirements?	
			Does the SSP contain Test plans, procedures, and test reports	
			including risk assessment?	
			Does the SSP contain The test plan for ongoing testing and the frequency of such testing?	
			Does the SSP contain a certification statement that the system	
			complies with the requirements of the protection level and	
			levels of concern for this system? Is the statement signed by the ISSM?	
			Does the SSP contain the documentation for accreditation	
			including the certification package? Did the CSA approve the	
		C	package and provide accreditation documentation?	
		Separation of Function		
		Requirements	If the system is Protection Level 3, are the functions of ISSO	
6.111.	8.611.	(Separation)	and system manager performed by separate people?
