

# SANS 2020 Cyber Threat Intelligence Survey

Author: [Robert M. Lee](#) | Date: February 2020

SANS has been tracking the evolution of CTI as a mechanism for prevention, detection and response through numerous CTI summits and surveys, and has seen a gradual maturation of the field and its applications in information security. [The 2019 CTI survey](#) saw an increase in usage and interest in CTI, along with a diversification in how the intelligence is being used by organizations. While the use of CTI continues to grow, it was evident that there is no one-size-fits-all approach. Organizations leverage different types of CTI to meet different needs.

The 2020 Cyber Threat Intelligence (CTI) Survey will build on previous surveys to provide guidance on how organizations of all types can get the most out of CTI. The intent of this survey is to gain insight into:

- How consumers and generators of CTI leverage, create and measure intelligence
- Progress on automation of intelligence collection and processing
- Improvements realized as a result of using CTI
- Best practices in use across respondents' organizations
