Jumpstarting Remote Work Capabilities Securely: Free Resources for Safe and Effective Rollouts  |  A SANS Report

Author: John Pescatore  |  Date: May 14, 2020

Just as social distancing is key to reducing the impact of the COVID-19 virus, enabling remote workers is key to reducing the economic impact of social distancing. Rolling out remote work capabilities rapidly and securely are things we need to do and can do!

This whitepaper will add depth and detail to the recently-released SANS Security Awareness Work-from-Home Deployment Kit, an in-depth starting point to quickly train and secure your remote workforce. SANS Director of Emerging Security Trends John Pescatore will present real-world guidance from SANS and other industry experts on:

- How to quickly and securely roll-out a remote workforce
- How to best monitor ongoing operations and ensure sensitive business information doesn’t get breached
- What to plan for when operations begin to transition back to normal after the virus runs its course

Sponsorship Inclusions

**Whitepaper**

Sponsors will receive a draft of the paper for review and a final, branded whitepaper for their use.

**Webcast**

The whitepaper includes an associated webcast presented by the author. Sponsors will receive the webcast recording for their own promotions. Webcasts are archived for one year after the webcast date. Registrations may still be processed for archive viewing of the webcast. Guarantee lead of 200 leads with no cap.  **Webcast Date: May 14, 2020**
How Are Remote Workers Working? A SANS Poll

Author: Heather Mahalik | Date: June 4, 2020

Isolation against COVID-19 has caused a sudden and unprecedented shift in the way organizations manage their workers. Instead of logging into resources from inside the protected network on company-sanctioned devices, employees are suddenly working from home on any number of personal and company-owned mobile devices.

To find out how this shift has impacted organizational structure, this poll will ask a short series of targeted questions about how those workers are carrying on their business from afar. For example:

• What resources are newly-remote workers accessing while doing their jobs from home?
• Where do these resources reside? (internally, cloud, portal, etc.)
• What types of devices are they using?
• Are those personal or company-owned devices? Managed or unmanaged?
• How are they accessing their resources (over HTTPS, VPN tunneling, etc.)
• What is their level of authentication? (password, multi-factor, etc.)

After the poll results are collected, SANS author Heather Mahalik will develop a whitepaper that offers quick checklists and actionable security advice based on responses. These checklists should quickly help organizations get up to speed with how to implement processes to securely and sanely support a new, overnight remote workforce.
